## MOTION PRO Pushrod Tool for HD II, P/N 08-0744

This tool is used to compress the pushrod cap for installation and removal of the retainer. Designed for use on Harley-Davidson® collapsible pushrod tubes on Twin Cam and earlier models.

---

To use the Motion Pro Pushrod Tool for HD II, slip the flat portion of the tool under the bottom fin on the head. The cup then goes over the cap or the larger portion of the tube. Compress the handles and the spring cap retainer is easily removed or installed.
